

Milk frother

Learn how the milk frother works in conjunction with the espresso machine.

Written By: Matt P. Lamparter

INTRODUCTION

This guide will show you how to use the automatic milk frother to make a cup of cappuccino, latte, etc.

Step 1 — Setting up

- Locate the milk jug, make sure there is a frothing whisk
- Open the lid and add milk accordingly:
 - If frothing milk with or without heating: add 150-250ml of milk indicated by the MIN line and the middle MAX line
 - If heating WITHOUT frothing milk: add 150-500 ml of milk indicated by the MIN line and the top MAX line

⚠ DO NOT go over the MAX line, milk will greatly expand in volume after frothing and can spill out

- Close the lid and place it onto the power base

Step 2 — Using the milk frother

- Press the selector. There are 4 modes depending on your usage:
 - Red: Heating and frothing milk. Press 1 time
 - Orange: Heating without frothing. Press 2 times
 - Light Purple: Heating chocolate milk
 - Light Blue: Frothing without heating
- After flashing for 3 seconds, the machine will run. Machine and indicator light will turn off after the milk is ready

Step 3 — Clean up

- Rinse the milk jug and the lid
- ☒ Remember that not cleaning up after yourself may cause you to lose your certification!
